- **Do you know what questions to ask an opponent's IT associate in order gain a clear understanding of whether a litigation hold was properly executed or not?**
- **Are you confident that you understand how classifications of electronically stored information are created, maintained, stored, and backed-up in the organization?**
- **Does the representative from your client's corporation understand the magnitude and purpose of the line of questioning about which she is going to face?**
- **Is she able to anticipate what sort of questions it will be necessary that she answer?**

Join Forensicon's Anthony Hernandez as he walks you through several effective lines of 30(b)(6) questioning. Learn about what areas of a corporation's information system are critical to the storage of ESI, and gain familiarity with policies and procedures being instituted by companies today. The necessity for discovery of electronically stored information is a foregone conclusion in modern day litigation. Litigants are now faced with the difficulty and frustration of locating and preserving that information at the outset of a case. There is not only a need to understand your client's information system, but your opponent's as well, in order to ensure proper discovery requests and ascertain the breadth and universe of electronics documents. One of the attorney's most useful tools in gaining and ensuring an accurate picture of an opponent's information system is the 30(b)(6) deposition.

### Expert Biography:

Anthony Hernandez is the Production Manager at Forensicon, Inc. He is responsible for overseeing process workflow and insuring the quality standards of all forensic work. Additionally, he maintains internal project tracking mechanisms and serves as the primary contact for clients with questions about the status of their cases. Mr. Hernandez also serves as an Associate Forensic Examiner, assisting with performing evidence intake, creating bit-stream images of client hard drives, compiling preliminary forensic analysis reports, and creating productions for distribution to clients. Additionally, he assists his clients with the drafting of effective electronic discovery protocols, and as well assists them in preparing for the depositions of technical employees. Previously, Mr. Hernandez was Technology Manager at Paragon Legal Technology Support where he worked on numerous imaging and electronic discovery projects for law firms. He spent the majority of his time processing digital evidence and building client databases of imaged documents, in addition to educating clients on how to utilize litigation tools to gain a competitive advantage in their cases. Before Paragon, Mr. Hernandez began his career with the litigation firm of Novack and Macey. Given his experience at the law firm, e-discovery vendor, and forensic level, Anthony provides a broad and unique perspective to the technological challenges of modern litigation.
